| Paper No(s)/Mail Date                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 6) Other:                                                                                                                                           |                                                                                                    | •        |  |  |  |

Art Unit: 2192

#### **Detailed Action**

Page 2

1. This action is in response to the application filed 12/29/05.

2. Claims 1 - 3, 5 - 7, 9,10,12 and 14 - 24 have been amended.

### Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 1 3, 5, 21 & 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mills USPN 6,055,560 (art of record) in view of Schwaderrer et al. USPN 6,393,96 B1 (hereinafter "Schwderrer", art being made of record).

Regarding claim 1, Mills discloses, a method A television set-top terminal (FIG1, set top box. 108), comprising:

a computer readable, medium having computer program code (2:55 – 57); and means for executing said computer program code to implement an Application Programming Interface (API) wherein: (FIG. 2, API 152 and at 5:30 – 32);

Art Unit: 2192

application data which defines applications is recovered at the terminal according to locators associated with the applications (5:57-64, see panel stacking and back track (recover));

the applications are registered and installed at the terminal (8:2-6, see install and download, also see 12:20-30 for update);

the API enables running and subsequent stopping of the applications (6:5-10, see stop button ); and

the API enables the retrieval of the applications as broadcasts software applications (4:60 – 65, see queue and broadcast, also see 8:15 – 20 for retrieving);

the API enables pausing of the applications once they are running, and subsequent resuming of the applications (5:10 – 15, see suspension and resume).

Mills doesn't expressly disclose the means for executing said computer program code being located in said set-top terminal. However, Schwaderrer in analogous art and similar configuration of a set-top terminal discloses an intelligent communication device (Abstract) and independent program, comprising an interactive application (32), which runs on the set top box and accesses one or more servers to send and receive information (6:24 – 30). Therefore it would have been obvious to one of ordinary skill in the art at the time the invention was made to combine, Mills and Schwderrer because, it would enable the set-top box to function more independently (Schwarderrer, Abstract).

Art Unit: 2192

Regarding claim 2, the terminal of claim 1, wherein: a user is notified of the presence of the applications after registration and installation thereof (Mills, Col. 19: 23 – 25).

Regarding claim 3, the terminal of claim 1, wherein: said API enables the retrieval of the applications as downloadable software applications (Mills, 8:3 – 6, see "retrieves appropriate panels to download").

Regarding claim 5, the terminal of claim 1, wherein:

said API is independent of an operating system and hardware of the terminal (Mills, 5:32 – 36, see " without knowing the database language or which type of database is being used...).

Regarding claim 21, the method version of claim 1, see rationale as previously discussed above.

Regarding claim 22, the method version of claim 2, see rationale as previously discussed above.

5. Claims 6,7, 9, 10, 12,14 – 20, 23 & 24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mills USPN 6,055,560 (art of record) in view of Schwaderrer et

Art Unit: 2192

al. USPN 6,393,96 B1 (hereinafter "Schwderrer", art being made of record) and further in view of ITU-T/ ISO documents (hereinafter "ISO").

Regarding claim 6, Mills as modified by Schwaderrer discloses a television settop terminal (FIG.5, 108), comprising:

a computer readable medium having computer program code (2:55 – 57); and means for executing said computer program code to implement an Application Programming Interface (API) wherein:

application data which defines applications is recovered at the terminal according to locators associated with the applications (5:57-64, see panel stacking and back track (recover));

the applications are registered and installed at the terminal (8:2-6, see install and download); and

the API enables particular ones of the applications to advertise their respective states to other applications (5:20 – 25). Although, Mills and Schwaderrer doesn't explicitly disclose providing an ITU-T X.731 based mechanism for monitoring and controlling the applications, wherein said ITU-TX.731 is an international standard which defines management states, status codes and state transitions for manageable objects, he does disclose a telecommunication system utilizing X. 25 an earlier standard, see FIG. 5 and FIG. 6, 116, and associated text. However, ISO shows on page 4, that the X.731 is a Generic model for state management functions and has been around since (01/92).

Art Unit: 2192

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to combine Mills and Scwarderrer with ISO because, ITU-TX. 731 is a is a generic model for state management and would have enabled the system to be configured to more efficiently manage the application.

Regarding claim 7, the terminal of claim 6, wherein:

a user is notified of the presence of the applications after registration and installation thereof (Mills, 5:20-25, see current state).

Regarding claim 9, the terminal of claim 6, wherein:

said API enables at least one of the other applications to access the advertised state of at least one of the particular advertising applications (Mills, 5:20 – 25, see current state).

Regarding claim 10, the terminal of claim 6, wherein:

said API enables retrieval of version information associated with the applications (Mills, 8:1 – 5, see matching and retrieving appropriate panels to download).

Regarding claim 12, the terminal of claim 6, wherein: API enables verification of the integrity of all of the applications (Mills,15:5 – 10, see "set top enabling code verifies").

Art Unit: 2192

Regarding claim 14, the terminal of claim 6, wherein:

said API enables administrative locking and unlocking of the applications (Mills, 8:62 – 67, see lock bit).

Regarding claim 15, the terminal of claim 6, wherein:

said API enables particular ones of the applications to advertise respective alarm statuses thereof to other ones of the applications (Mills, 7: 12 – 15, see " video information is then provided to the set top box 108 for purpose of display on the television 106").

Regarding claim 16, the terminal of claim 6, wherein:

said API enables particular ones of the applications to advertise respective availability statuses thereof to other ones of the applications (Mills, 5:20-25, see current state).

Regarding claim 17, the terminal of claim 6, wherein:

said API enables particular ones of the applications to advertise respective procedural statuses thereof to other ones of the applications (Mills, 7: 12 – 15, see "video information is then provided to the set top box 108 for purpose of display on the television 106").

Regarding claim 18, the terminal of claim 6, wherein:

Art Unit: 2192

said API enables particular ones of the applications to advertise respective operational states thereof to other ones of the applications Mills, 7: 12 – 15, see "video information is then provided to the set top box 108 for purpose of display on the television 106").

Regarding claim 19, the terminal of claim 6, wherein:

said API enables particular ones of the applications to advertise respective administrative states thereof to other ones of the applications (Mills, 7: 12 – 15, see "video information is then provided to the set top box 108 for purpose of display on the television 106").

Regarding claim 20, the terminal of claim 6, wherein:

said API enables particular ones of the applications to advertise respective usage states thereof to other ones of the applications (Mills,5:20 – 25).

Regarding claim 23, the method version of claim 6, see rationale as previously discussed above.

Regarding claim 24, the method version of claim 7, see rationale as previously discussed above.

## Response to Arguments

6. Applicant's arguments with respect to claims 1 – 3, 5 – 7, 9,10,12 and 14 –24 have been considered but are moot in view of the new ground(s) of rejection.

Regarding newly amended limitations Schwarderrer USPN 6,393,496 has been applied to show limitations.

#### Conclusion

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Chuck Kendall whose telephone number is 571-2723698. The examiner can normally be reached on 10:00 am - 6:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tuan Dam can be reached on 571-2723695. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.
